EE680

Air Velocity and Temperature Sensor for Laminar Flow

The EE680 is dedicated for precise measurement of the air velocity (Av) and the temperature (T) in laminar flow. The GMP-compliant design is ideal for cleanrooms and safety cabinets in pharmaceutical, life sciences and microelectronics industries.

Outstanding Measurement Performance
The EE680 operates on the hot film anemometer principle. It employs an E+E thin film sensing element which stands for excellent accuracy down to 0.1 m/s (20 ft/min), long term stability and low angular dependency. The multipoint air velocity factory adjustment leads to best performance over the entire working range. The E+E proprietary coating protects the sensing element against H_2O_2 and corrosive cleaning agents.

Versatility
The EE680 is available as straight and angled version with various probe lengths. The design is optimized for easy cleaning, while the mounting concept and the M12 stainless steel connector facilitate the installation and replacement. A led ring integrated in the stainless steel enclosure indicates the laminar flow conditions and the sensor status.

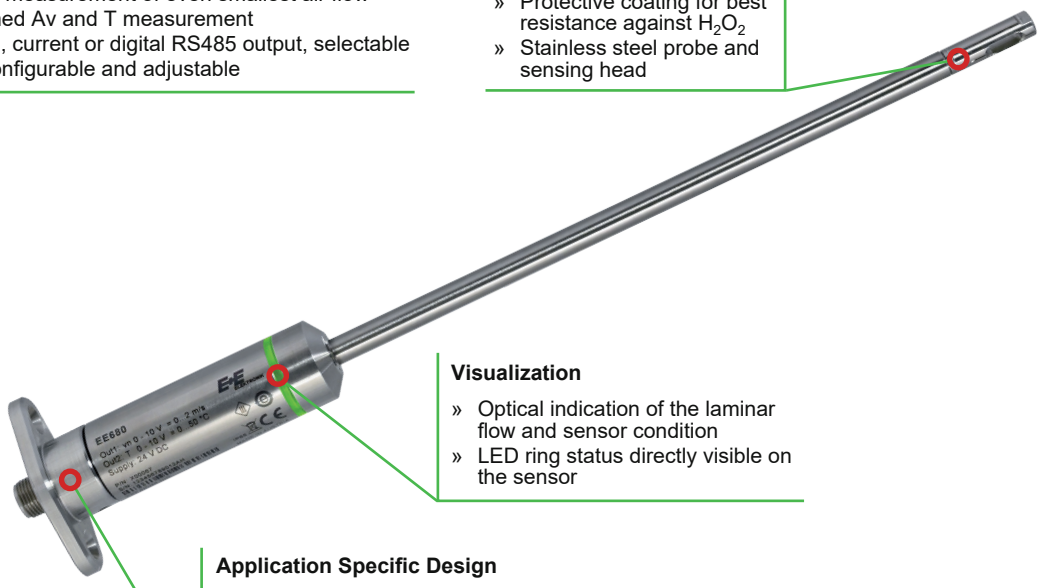
Analogue Outputs or RS485 Interface, User Selectable
The Av and T measured data is available as current or voltage analogue outputs or on the RS485 interface with Modbus RTU protocol.

User Configurable and Adjustable
The setup and adjustment of the EE680 can be easily performed with an optional adapter and the free EE-PCS Product Configuration Software.

Features

EE680 Sensor
- » Highly accurate over the entire working range
- » Precise measurement of even smallest air flow
- » Combined Av and T measurement
- » Voltage, current or digital RS485 output, selectable
- » User configurable and adjustable

Probe and Sensing Element
- » Protective coating for best resistance against H_2O_2
- » Stainless steel probe and sensing head



Visualization
- » Optical indication of the laminar flow and sensor condition
- » LED ring status directly visible on the sensor

Application Specific Design
- » GMP compliant design for easy cleaning
- » Straight or angled probe with various lengths
- » Stainless steel mounting flange
- » M12 stainless steel connector

Inspection Certificate
- » according to DIN EN 10204-3.1 with six Av points

Protective Sensor Coating

The E+E proprietary sensor coating is a protective layer applied to the active surface of the sensing element. The coating substantially extends the life-time and the measurement performance of the E+E sensor in applications with frequent H_2O_2 sterilization processes. Additionally, it improves the sensor's long term stability.

Technical Data

Measurands

Air Velocity[1)]

Measuring range		0...2 m/s (0...400 ft/min)
Accuracy[2)]		0.1...2 m/s (20...400 ft/min): ± (0.5 % of mv + 0.05 m/s)
in air at 23 °C (73 °F) and 1013 hPa (14.7 psi)		mv = measured value
Dependence	of inflow angle (α)	< 3 % for α < ±10°
	of inflow direction	< 3 %
Response time t_{90}, typ.		< 1.5...40 s (Factory setting: 1.5 s, configurable via EE-PCS)

Temperature

Measuring range	-20...70 °C (-4...158 °F)

Digital interface	RS485 (EE680 = 1 unit load)	
Protocol	Modbus RTU	
Default settings	Baud rate 9600, parity even, stop bits 1, slave ID 68	

General

Supply voltage	24 V DC ±20 %
Current consumption, typ.	< 30 mA
Electrical connection	M12x1, 5 poles, stainless steel 1.4404
Protection rating	IP65
Enclosure material	Stainless steel 1.4404
Pressure range	700...1300 hPa (10.2...18.9 psi)
Electromagnetic compatibility *(Industrial Environment)*	EN 61326-1 EN 61326-2-3
Storage conditions	-20...70 °C (-40...158 °F) 0...95 % RH, non-condensing
Configuration and adjustment	EE-PCS Product Configuration Software (free download) and configuration adapter

1) Standardized air velocity vn at standard conditions (factory setup): Tn = 23 °C (73 °F), pn = 1013.25 hPa (14.7 psi), settable via EE-PCS
2) The accuracy statement includes the uncertainty of the factory calibration with an enhancement factor k=2 (2-times standard deviation). The accuracy was calculated in accordance with EA-4/02 and with regard to GUM (Guide to the Expression of Uncertainty in Measurement)
3) At air flows ≥ 0.45 m/s
